🌸 Papoine Insights Agent

An AI data-analysis agent for Papoine, a flower subscription business in Riga. Ask a business question in plain English; the agent plans the analysis, calls pandas tools, checks the results (and fixes its own errors), then gives an answer, a chart and a recommendation.

Live app: ADD-YOUR-STREAMLIT-LINK-HERE

How it works (ReAct loop)

1. **Reason** – the LLM (Google Gemini) decides what it needs to know
2. **Act** – it calls a tool: `describe_data`, `aggregate` or `percentage` (pandas)
3. **Observe** – it reads the result or error
4. **Repeat** (max 4 tool calls), then write the final answer

Data

`papoine_orders_sample.csv` is a **generated sample dataset** (728 orders, Nov 2025 – Oct 2026), created by `generate_sample_data.py`. It is not real Papoine data. You can upload your own CSV in the app.

Run locally

```
pip install -r requirements.txt
streamlit run app.py
```

Tech

Python · pandas · matplotlib · Streamlit · Google Gemini API (google-genai)
